## FLOW SWITCH SELECTION GUIDE

Calibration: flow stands are calibrated to the National Bureau of Standards and Thomas Products Ltd. recalibration schedule.
$\square$ Ideas
$\square$ Solutions
Model 1100

$\square$ Technical Support $\square$ On-Time Delivery
$\square$ Quality

Operational Q.C. system and manual, MIL I 45208 MIL STD 45662.

Raw materials inventoried in a controlled and segregated department under Thomas Products, Lid. stock rotation program.

Call-outs presented are typical to their
respective models.
Call-outs presented are typical to their
respective models.

Model 2600

## Typical Shuttle Type:

A magnet equipped shuttle is displaced at the proper calibrated flow of either liquid or gas to actuate the hermetically sealed reed switch. At flow rates under the set point, clearance is provided for the liquid or gas to continue to flow. When flow rates exceed the set point the shuttle or piston is displaced even further to reveal a smooth, clear opening for a low pressure drop.

## FIXED SET POINTS, 3/4" - 3" NPT, BRONZE \& SST

## Applications:

- "INDUSTRIAL STANDARD" Rugged and accurate flow detection for most applications.
- Machine Tool Industry
- HVAC Equipment

Shock and vibration approved.

True globe-shaped housings yield lower $\Delta P$ and minimize turbulence.

Dimensional Data:

## Notes: Model 1100

1. Standard flow calibration is in water @ $70^{\circ} \mathrm{F}$. Calibrated on increasing flow.
2. Temperature effect on flow settings: water calibration, slight change; oil varies with viscosity.
3. Strain reliefs are standard. Optional silicone potting avail. Consult factory.
4. Optional 100W SPST reed switches are stocked. Consult factory.
5. Relays for higher loads, junction boxes, terminal strips, etc. are available. See accessories section for details (See Page 28)
6. Optional cables available. Consult factory.
7. Other wetted materials: ceramic ring magnet.
8. Optional SST identification tags attached to unit. Consult factory.
9. Optional MIS connector. MS3102E1 OS-3P
10. Optional port sizes: BSP, SAE, silver braze, socket weld, etc. Consult factory.
11. High temperature units available to $400^{\circ} \mathrm{F}$. Consult factory.
12. Standard flow settings are calibrated in water. Other set points in water or oil are available. Consult factory.
13. For pipe sizes smaller than $3 / 4$ ", install appropriate size bushings.
14. Calibration: Flow stands are calibrated to the National Bureau of Standards and Thomas Products Ltd. recalibration schedule.

## Specialty Options:

MODEL 2600
Economical PVC. Straight through flow path.

## FIXED SET POINTS, 3/4" NPT, BRONZE

## Notes: Model 1300

1. Standard flow calibration is in water @ $70^{\circ} \mathrm{F}$. Calibrated on increasing flow.
2. Temperature effect on flow settings: water calibration, slight change; oil varies with viscosity.
3. Optional 100W SPST reed switches are stocked. Consult factory.
4. Relays for higher loads, junction boxes, terminal strips, etc. are available. See accessories section for details (See Page 28)
5. Optional cables available. Consult factory.
6. Other wetted materials: ceramic ring magnet.
7. Optional SST identification tags attached to unit. Consult factory.
8. Optional port sizes: BSPT, SAE, silver braze, socket weld, etc. Consult factory.
9. High temperature units available to $400^{\circ}$ F. Consult factory.
10. Standard flow settings are calibrated in water. Other set points in water or oil are available. Consult factory.
11. Calibration: Flow stands are calibrated to the National Bureau of Standards and Thomas Products Ltd. recalibration schedule.

## PISTONS FOR BRASS OR 316 SST HOUSINGS:

Electrical \& Switch Ratings: Page 10.

## Specialty Options:

## Notes: Model 1600 \& 1700

1. Standard flow calibration is in water @ $70^{\circ} \mathrm{F}$ with lead wires up. Calibrated on increasing flow.
2. Temperature effect on flow settings: water calibration, slight change; oil varies with viscosity; gas, slight change.
3. Set point accuracy will change slightly in other than calibrated position.
4. Model 1600 is UL recognized with a SPST reed switch rated pilot duty 20 VA 120240 VAC, $174^{\circ} \mathrm{F}$.
5. Relays for higher loads, junction boxes, terminal strips, etc. are available. See accessories section for details (See Page 28)
6. Also available: leads in different lengths, cable, terminated ends, etc. Consult factory.
7. Optional 3 Pin M/S connector -MS3102E10S-3P. Consult factory.
8. High temperature units available to $400^{\circ} \mathrm{F}$. Consult factory.
9. Standard flow settings are calibrated in water. Other set points in water or oil are available. Consult factory.
10. Optional air set points for Model 1600 are available. Consult factory with CFM and line pressure.
11. Optional air set points for Model 1700 are available. Consult factory with CFH and line pressure.
12. Other wetted materials: Hysol epoxy.
13. Model 1700 orifice dia. is $5 / 16$ "; inlet fitting supplied by customer must be $3 / 8$ " I.D. minimum.
14. All SST piston eliminating epoxy is available. Consult factory.
15. Polysulfone for water in brass housing.
16. Brass for oil in brass housing.
17. SST for SST housing.
18. Calibration: Flow stands are calibrated to the National Bureau of Standards and Thomas Products Ltd. recalibration schedule.

Pressure Drop $\Delta \mathbf{p}$ : Model 1700

## FIXED SET POINTS, 1/4" NPT, BRASS \& SST

## Applications:

- The "mini" small and accurate in line flow switch detects low or high flow rates.
- Fixed actuations from . 1 GPM to 1.5 GPM
- UL File No. E86797

## Notes: Model 1900

1. Standard flow calibration is in water @ $70^{\circ} \mathrm{F}$ with lead wires up. Calibrated on increasing flow.
2. Temperature effect on flow settings: water calibration, slight change; oil varies with viscosity.
3. Set point accuracy will change slightly in other than calibrated position.
4. Optional aluminum housings with SST trim are stocked. Consult factory.
5. Optional mounting holes available. Consult factory.
6. Also available: leads in different lengths, cable, terminated ends, etc. Consult factory.
7. Relays for higher loads are available. See accessories section for details (See Page 28)
8. High temperature units available to $400^{\circ} \mathrm{F}$. Consult factory.
9. Standard flow settings are calibrated in water. Other set points in water or oil are available. Consult factory.
10. Other wetted materials: Hysol Epoxy
11. All SST piston for either brass or SST housing, eliminating hysol epoxy. Consult factory.
12. Calibration: Flow stands are calibrated to the National Bureau of Standards and Thomas Products Ltd. recalibration schedule.

Specialty Options:

See Model 1700 for set points from $2 \mathrm{cc} / \mathrm{min}$. to $300 \mathrm{cc} / \mathrm{min}$.

## FIXED SET POINTS, 1/2* NPT, BRASS \& SST

Easy disassembly for cleaning or service.

## Electrical:

## 2100 \& 2200

## FIXED SET POINTS, 9/16'י - 18' UNF-2B, PLASTIC

## Model 2100

UL
Because we mold in-house, we can certify that our polysulfone flow switches use only virgin material and runners are not introduced nor have color concentrates been added during processing that can hinder FDA requirements or additive leaching.

> Unique reverse taper design helps pass

Full size out port minimizes turbulence

## Applications:

- Plastic configuration throughout.
- Rugged yet economical flow switch for monitoring liquid flow or no flow conditions.
- FDA Approved Polysulfone
- UL File No. E86797

Dimensional Data: Model 2100 \& 2200

Model 2100 Modified for straight-thru flow and two $1 / 4$ " NPT adapters.

## FIXED SET POINTS, 9/16"- 18" UNF-2B, PLASTIC

Model 2200

Full size out port minimizes turbulence

## Applications:

- Similar to 2100. Ideally suited where no metal parts can come in contact with the liquid.
- FDA Approved Polysulfone.
- UL File No. E 86797

Springless design, no metal wetted components.

Exterior mounted alnico magnet returns the piston eliminating return spring.

Large, full size reed switch silicone potted for shock and vibration deadening.

One-piece housing yields burst strength of $1500 \pm \mathrm{PSI} @ 70^{\circ}$.

## Notes: Model 2100/2200

1. Standard flow calibration is in water @ $70^{\circ} \mathrm{F}$ with lead wires up. Calibrated on increasing flow.
2. Model 2100 set point accuracy will change slightly in other than calibrated position.
3. Model 2200 must be installed with lead wires up.
4. Polysulfone is a FDA approved material.
5. Lead wires are available in different lengths, terminated ends, cables, etc. Consult factory.
6. Relays are available for handling higher loads. See accessories section for details. (See Page 28)
7. Actual housing burst strength of 1500 PSI $\pm @ 70^{\circ} \mathrm{F}$.
8. Standard flow settings are calibrated in water as low as $2 \mathrm{cc} / \mathrm{min}$. Other set points in water are available. Consult factory.
9. Calibration: Flow stands are calibrated to the National Bureau of Standards and Thomas Products Ltd. recalibration schedule.

Specifications:

| 42753 |  |
| 42754 |  |

## Applications:

- PVC construction
- Removable bonnet assembly
- Return spring for any mounting attitude.

BOTH PORTS

## Notes: Model 1800

1. Standard flow calibration is in water @ $70^{\circ} \mathrm{F}$ with lead wires up. Calibrated on increasing flow.
2. Optional SPDT reed switches are available. Consult factory.
3. Standard flow set points available to 6.0 GPM in water. Consult factory.
4. Lead wires are available in different lengths, terminated ends, cables, etc. Consult factory.
5. Relays are available for handling higher loads. See accessories section for details. (See page 28.)
6. Other wetted material: ceramic ring magnet.
7. When specifying Model 1800 with $1 / 2^{\prime \prime}$ NPT, conduit connector, only plastic junction box and flexible conduit should be used.
8. Model 1800 is available molded in CPVC. Consult factory.
9. Calibration: Flow stands are calibrated to the National Bureau of Standards and Thomas Products Ltd. recalibration schedule.

## Specialty Option:

Model 1800 with $1 / 2^{\prime \prime}$ NPT conduit connector. See Note 7.

## FIXED SET POINTS, 1/2" - 2" PVC

Plastic components are molded in-house using only certified 100\% virgin material. Runners are not reintroduced to the performance parts.

## UL

Solid one-piece removable bonnet assembly means safer use to 150 PSIG.

## Applications:

- Straight thru flow design.
- PVC Construction.
- Removeable bonnet assembly.
- Return spring for any mounting attitude.
- Very low pressure drop.

Anti-menscous projections on shuttle prevents shuttle from drying in place after long machine shutdowns.

Patent No. 5,162,624
Patented clapper design bypasses higher flow after the set point is reached to allow for full flow and help pass particulates.

## ADJUSTABLE SET POINTS, 1 गNPT, BRONZE

## Applications:

- Protects pumps and bearings.
- Coolant Systems.
- HVAC Equipment.

## Notes: Model 1200/1400

1. Strain reliefs are standard. Optional silicone potting avail. Consult factory.
2. Optional 100 W SPST reed switches are stocked. Consult factory.
3. Relays for higher loads, junction boxes, terminal strips, etc. are available. See accessories section for details (See Page 28)
4. Also available: Leads in different lengths, cables, terminated ends, etc. Consult factory.
5. Other wetted materials: ceramic ring magnet.
6. Optional port sizes: BSP, SAE, silverbraze, socket weld, etc. Consult factory.
7. High temperature units available to $400^{\circ}$ F. Consult factory.
8. Factory calibrated set points available. Consult factory.
9. For smaller pipe sizes, install appropriate size bushings.
10. Model 1200 is available in 316 SST. Consult factory.

Specifications:

True globe-shaped housings yield lower $\Delta p$ and minimize turbulence.

## Pressure Drop $\Delta \mathbf{p}$ :

## Applications:

## COOLANT MANIFOLD ON AN INJECTION MOLDING MACHINE:

Eliminate constant visual inspection of minimum coolant flow by using flow switches. You can be sure sufficient flow is automatically monitored. Flow switches activate audible alarms, lights, etc., warning you of insufficient flow. Operation is simple:

1. Close all flow control valves.
2. Open all flow switch set point adjusting vanes (alarms will turn on).
3. Turn on coolant.
4. Open each flow control valve to correct flow rate (starting at highest flow).
5. Close each flow switch set point adjusting vane until alarms just turn off.
Whenever the flow rates drop under that set point, your alarms will turn on.

LUBE OIL MONITORING SYSTEM ON A ROLLING
MACHINE: 1 GPM is needed in the oil bath to lubricate and cool large bronze bearings.

Whenever the flow rate rises or drops out of the set point range, your alarm will turn on.

## ADJUSTABLE SET POINTS, 1/2" NPT, BRASS/SST

## Specifications:

## Notes: Model 1500

1. Approximate SCFM depending on line pressure.
2. Optional lower air set point range. Consult factory.
3. Optional lower water set point range .2-10 GPM. Consult factory.
4. Factory calibrated set points available. Consult factory.
5. Other wetted materials: epoxy.
6. Polysulfone for water in brass housing
7. Brass for oil in brass housing.
8. SST for SST housing.
9. Relays for higher loads, junction boxes, terminal strips, etc. are available. See accessories section for details. Page 28.
10. High temperature units are available to $400^{\circ}$ F. Consult factory.
11. Also available: leads in different lengths, cable, terminated ends, etc. Consult factory.

application information

Model 1500 with M/S
connector MS3102E10S-3P

Specifications:

## Dimensional $\quad[1 /<$ WIRES

1. Flow tests were performed in water with unit installed into standard reducing tee.
2. Set point accuracy depends on paddle cut-off length.
3. Unit installs into a 1 " reducing tee or weld-a-let etc. for 1 " pipe sizes and up.
4. Install vertically as shown, lead wires up.
5. Higher temperature units available up to $450^{\circ}$ F. Consult factory.
6. Relays for higher loads, junction boxes, terminal strips, etc. are available. See accessories section for details (See Page 28)
7. To adjust flow set point, simply cut paddle for the appropriate set point listed. See also installation/maintenance sheet.
8. For pipe sizes larger than 3 ", actuation of the 5 " paddle is a velocity of approximately .5 ft ./sec.
9. Also available: leads in different lengths, cable, terminated ends, etc. Consult factory.
10. Optional 100W SPST reed switches are stocked. Consult factory.

| 43704 | 1.5 <br> (See Note 7 \& 8) |  |  |  |  |

## Notes: Model 5200

1. Flow rates are for water, these valves will decrease as the viscosity increases.
2. All wetted parts in brass housing are brass and 316 SST or 316 SST housing is all 316 SST.
3. For pipe sizes larger than 1 ", indication can be seen at water velocity of 3 ft ./sec.
4. High temperature modifications available.
5. Pressure drop < 1 PSIG.
6. 5.0 GPM indicators can be installed in any mounting attitude.
7. 1.5 GPM indicators must be installed horizontally in a vertical pipe run with the flow direction up.
8. If you need to know what direction the liquid is flowing either a 43702 or 43704 may be used. Unit must be installed in a horizontal pipe run, indicator housing up at 12:00. Depending on installation, the red and green side will indicate the direction of flow.

## Operation:

The housing has 2 separate chambers. In the front chamber $t$ behind a transparent lens is a 2 color roller, half red, half green and it is equipped with a magnet. In the rear chamber is a magnet equipped target free to swing with the action of the liquid's flow. The poles of the 2 magnets are opposite creating a permanent interlock. As the liquid flow falls, the target and magnet swing to rotate the roller exposing the red side indicating low liquid flow. Accordingly, as the flow rises, the green side indicating a satisfactory liquid flow condition appears.

Model 5200 illustrated at no flow condition, red side visible. Unit is installed into a standard PVC $1 \times 1 \times 3 / 4$ " SCH 40 reducing tee or a similar method may be used.

## LEVEL SWITCH SELECTION GUIDE

## Model 4000 Custom Level Switch

. 9
: 9

UL recognized.

## Model 5100 <br> Liquid Level Indicator

Approved packaging.

Inspection using calibrated tools and gages traceable to National Bureau of Standards under Thomas Products, Ltd . recalibration system.
njection molding in-house, Thomas Products Ltd. can certify that only virgin materials are used and no reprocessing is done nor has color concentrate been added during molding

## Operation:

The housing has 2 separate chambers. In the front chamber behind a transparent lens is a 2 color roller, half red, half green and it is equipped with a magnet. In the rear chamber is a magnet equipped float free to swing with the action of the liquid's level. The poles of the 2 magnets are opposite creating a permanent interlock. As the liquid level falls, the float and magnet swing to rotate the roller exposing the red side indication low liquid level. Accordingly, as the level rises, the green side indicating a satisfactory liquid level condition appears.

Operational Q.C. systems and manual, MIL | 45208 and MIL STD 45662.

Typical Operation:
A magnet equipped float moves directly with the liquids level to actuate the hermetically sealed reed switch within the stem.

## 4000 CUSTOM LEVEL SWITCH

## Notes:

1. Part Number 3555 PVC float is used for PVC Model 4000. See specifications
2. Also available: leads in different lengths, cable, terminated ends, etc. consult factory.
3. Relays are available for handling higher electrical loads than allowed. See accessory section for details.
4. Grip rings come standard at no extra charge.
5. Optional collars are available from stock. See drawing 1.0.
6. Special reed switches are stocked to yield a hysteresis of $1 / 4$ ". Consult factory.
7. Style 1 mounting installs from the inside of the tank into a $1 / 2$ " NPT boss. Specify float part number: 3506, 3507, 3508, or 3555.
8. Style 2 mounting installs from the outside of the tank into a $11 / 4$ " NPT boss. Specify float part number 3507 .
9. Style 3 mounting installs from the outside of the tank into a 2" NPT boss. Specify float part number: 3506,3507 , 3508 , or 3555.
10. Style 4 flange mounting installs from the outside of the tank onto a 3" ANSI flange mating surface. Specify float part number $3506,3507,3508$, or 3555.
11. Style 10 external tank mounting installs to the tank exterior. Bottom "run" port can be fabricated at branch position typical to top port. Thomas Products LTD. can machine ports on both bronze and stainless steel housings for silver braze or socket weld end connections. Consult factory. Specify float part number: 3506 or 3508.
12. Style 11 mountings install from the outside of the tank onto a 3" ANSI flange mating surface. Note: The bolt patterns angular position must be followed per drawing. See Multi-Level Specification Form 4000. Specify float part number: 3506,3507 or 3508.
13. Style 10 external tank unit is available in all PVC construction. Consult factory.
14. Styles 4 \& 11 flange mounting types are also available with a $1^{\prime \prime}, 2$ " or 4 " 150\# ANSI flanges.
15. Multi-level Specification Form 4000 must be used to ensure correct dimensional data
16. All wetted parts PVC.
17. Custom interface floats are available. Consult factory.
18. Materials of copper-nickel, titanium, hastelloy and aluminum are stocked. Consult factory.

PVG
Unique assembly procedure eliminates stress by actually suspending the reed switch allowing for thermal expansion and contraction.

Unique taper joints; not merely glued but an interference fit, solvent bonded means the plastic actually fuses together. \# 3555 Only

## Notes:

1. Unit's maximum pressure rating is the lowest pressure rated component either mounting and stem pressure rating or float pressure rating.
2. Unit's maximum temperature rating is the lowest temperature rated component either polysulfone temperature range or float temperature range.
3. Pressure rating of styles $A$ \& $B$ mounting and stem are 100 PSI @ $72^{\circ} \mathrm{F}$. Also see float pressure rating. See Note 1.
4. Pressure rating of style C mounting and stem is 50 PSI @ $72^{\circ}$. Also see float pressure rating. See Note 1.
5. Pressure rating of style D mounting and stem is $10 \mathrm{PSI} @ 72^{\circ}$. Also see float pressure rating. See Note 1.
6. Also available: leads in different lengths, cable, and/or terminated ends, etc. Consult factory.
7. Relays are available for electrical loads higher than allowed. See Accessories section for details.
8. Style A mounting installs from the inside of the tank into a $1 / 8$ "NPT boss.
9. Style B mounting installs from the inside of the tank through a $3 / 8$ " dia. hole.
10. Style $C$ mounting installs from the outside of the tank into a 1 " NPT boss.
11. Style $D$ mounting installs from the outside of the tank onto a mating surface as dimensioned. Bore float clearance hole to suit specified float. Maximum float diameter 1 ".
12. Other floats than shown are available. See Model 4000, metal $5 / 16$ " diameter stem, styles 5-9 for details.
13. Request extra 1 " stem length to attach guy wires (customer supplied) for exceptionally long stems or if unit will be subjected to turbulence.
14. Custom interface floats are available. Consult factory.
15. Multi-level Specification Form 4000 must be used to ensure correct dimensional data.

## 3700 вотTLESWITCH

## METAL

## Applications:

- External of tank mount.
- Use this model when the tank's internal area is inaccessible.

## TYPICAL THREADED PIPE AND FITTING INSTALLATION

## Notes:

1. Brass stems use beryllium copper grip rings, 316 stainless stems use Ph 15-7 Mo grip rings, optional 316 stainless steel collars available, consult factory.
2. Optional high wattage SPST and SPDT reed switches are stocked. Consult factory.
3. Install unit vertical as shown; lead wires up.
4. Actual bronze housing burst pressure, $2500 \mathrm{psi} \pm @ 70^{\circ} \mathrm{F}$; SST housing higher.
5. Float specific gravity . 65
6. Optional silver braze ports to MIL-F-1183 and socket weld ports available Consult factory.
7. Weight $5.5 \pm \mathrm{lbs}$.
8. Approximate actuation in water. Specific gravity 1.0.
9. Optional cable available. Consult factory.
10. Higher temperature units available up to $450^{\circ} \mathrm{F}$. Consult factory.
11. Relays for higher loads, junction boxes, terminal strips, etc. are available. See accessories section for details.
12. Unit is supplied in N. 0 Tank Dry condition. Logic is reversed by inverting float.

If more than one switch point is needed, see Model 4000 Style 10, for custom length housings and switch points, to your requirements.

The unique design permits only the float to come in contact with the liquid, thereby eliminating the possibility of jamming caused by the metallic chips collecting on the magnet.

Grinding fluid contaminated with metallic chips and lube oil.

## Viscous epoxy.

One level switch maintains the proper level of a viscous epoxy used in automatic coating machines.

By simply bending the float arm, tank top mounting may be used in lieu of side of tank installation.

[^1]
## PLASTIC

$1 / 2$ " NPT
©T Strong Alnico bar magnet hermetically sealed inside means no other wetted material to
contaminate liquid or be attacked
by a corrosive liquid. DIMENSIONAL DATA

Round pivot pins add bearing surface for smooth operation and due to design clearances, squeeze out the liquid from either side during operation to help eliminate build-up.

Unique assembly procedure eliminates stress by actually suspending the reed switch allowing for thermal expansion and contraction.

## Operation:

## - Replaces Unreadable Sight Windows <br> - Non-Electrical <br> - Use in Hazardous Locations

Patent Number 5,425,271

The housing has 2 separate chambers. In the front chamber behind a transparent lens is a 2 color roller, half red, half green and it is equipped with a magnet. In the rear chamber is a magnet equipped float free to swing with the action of the liquid's level. The poles of the 2 magnets are opposite creating a permanent interlock. As the liquid level falls, the float and magnet swing to rotate the roller exposing the red side indication low liquid level. Accordingly, as the level rises, the green side indicating a satisfactory liquid level condition appears.

## Notes:

1. High temperature modifications available.Consult factory.
2. High pressure floats available. Consult factory.
3. All other wetted parts stainless steel.
4. Mounting attitude horizontal.
5. Specific gravity. 4 min .
6. Both styles 1 and 2 install through a $1^{932}$ " dia hole.

## METAL

- Replaces Unreadable Sight Windows
- Non-Electrical
- Use in Hazardous Locations

## Operation:

The housing has 2 separate chambers. In the front chamber, behind a transparent lens, is a 2-color flag (half red, half white) equipped with a magnet. In the rear chamber is a magnet equipped float, free to swing with the action of the liquid's level. The poles of the two (2) magnets are opposite creating a bi-stable interlocking condition. As the liquid level falls, the float and magnet swing down opening the magnetic coupling. This causes the flag to drop, exposing the red side and indicating a low liquid level. Accordingly, as the level rises, the magnet's proximity is shortened causing a magnetic attraction to snap up the flag exposing the white side and indicating a satisfactory liquid level condition.

## Notes:

1. All other wetted materials 316 stainless steel
2. Specific gravity .5 min .
3. Mounting attitude horizontal
4. Other flag colors or lettering available. Consult factory.

## ACCESSORIES

P/N 42755

## Junction Box

Explosion Proof for Hazardous Areas,
Wet Locations, Class I, Group C.D., Class II, Group E.F.G., Class III, and Nema 4. Junction Box is Supplied with 12 Closed End Crimp Connectors.

P/N 42761
Junction box (P/N 42755) with general purpose relay (P/N 42756) and clamp

P/N 42762
Junction box (P/N 42755) with 6 position terminal strip

P/N 42756
General purpose relay only
12A DPDT and 8 Fully Insulted Push-On Crimp Terminals

Relay Specifications:

## GLOSSARY

A [Elec.]: Amp. See "Ampere".
AC [Elec.]: (alternating current) Electrical current that reverses direction periodically.

AC Field [Elec.]: The space around a magnet or magnetic circuit which is under the influence of magnetic forces.

Actuation [Elec.]: To turn on.
Adjustable Set Point: Actuation point that can be field adjusted, usually within a given range.

Alnico Magnet: Aluminum, nickel, and copper alloy magnet.
Ampere [Elec.]: (amp) Unit of electrical current.
Arcing [Elec.]: An electric current through air or across the surface of an insulator associated with high voltage and usually occurs when a contact is opened, de-energizing an inductive load. Arcing of a contact will limit its life.

Beryllium Copper [Met.]: (BeCu) An alloy of copper and beryllium and not more than $3 \%$ beryllium.

Bonnet Assembly: The working mechanism in a shuttle type flow switch that contains the magnet and reed switch assembly.

Bulkhead Fitting: Straight thread with nut mounted through an unthreaded hole. Can be used with an 0 -ring or gasket.

BUNA: A brand of synthetic rubber made by polymerizing or copolymerizing butadiene with another material. Typical use carburtor floats.

Burst Strength [Mech.]: A measure of the ability of a material to withstand a given pressure without rupture.

Cable [Elec.]: A group of individually insulated conductors in twisted or parallel configuration under common sheath.

Cable Gland: Strain relief with integral waterproof seal.
Calibration: The act of determining by measuring with a standard; i.e., Thomas Products Limited's flow stands are calibrated to the National Bureau of Standards.

Calibration Position: The position of the flow switch at the time of setting the actuation point.

Capacitive Load [Electromag.]: The Ioad in which the capacitive reactance exceeds the inductive reactance; the load draws a leading current.

CCM: Cubic centimeter per minute.
Celsius Conversion: See "Conversion Factors".
CFM: Cubic foot per minute
Chemical Compatibility: A harmonious effect between a chemical and the materials with which it comes in contact.

Collars: Tubular float stops equipped with set screws used to limit float travel.

Condensation [Chem.]: Transformation of a gas to a liquid.
Conduit Connector: Threaded portion of unit specifically designed for the connection of a flexible conduit or junction boxes, etc.

Crazing [Eng.]: Network of fine cracks on or under the surface of a material; i.e., the crazing of certain plastics can be caused by chemical incompatibility.

Crimp on Connectors or Terminals: Male or female electrical components that can be affixed to lead wired by pinching.

Cunife Magnet: Copper, nickel, and iron alloy magnet.
DC [Elec.]: (direct current) Electric current which flows in one direction only, as opposed to alternating current.

Deactuation: To turn off.
Dead Band: The range between make and break.
Decreasing Set Point [FI. Mech.]: Actuation set as the flow decreases.

Differential [Cont. Sys.]: The difference between make and break operation in a control system.

Displacer: Flow detection device that relies on gravity to return the working mechanism to the inactive position.

DPDT [Elec.]: (double-pole, double-throw) Six-terminal switch or relay contact arrangement that simultaneously connects one pair of terminals to either of two other pairs of terminals.

Electrical Conversion Formula: See "Conversion Factors".
Electrical Current Shock: Excessive electrical load; esp. to a reed switch.

Envelope: The total amount of movement including its mean dimension and tolerance.

Explosion Proof: Apparatus enclosed in a case that is capable of both withstanding an explosion of a specified gas or vapor that may occur within it, and preventing the ignition of a specified gas or vapor surrounding the enclosure by sparks, flashes, or explosion of the gas of vapor within, and that operates at such an external temperature that a surrounding flammable atmosphere will not be ignited thereby

Fahrenheit Conversion: See "Conversion Factors".
Fixed Set Point: Factory set non-field-adjustable actuation point.
Flow Indicator: Nonelectrical device that indicates a predetemined amount of flow or the lack thereof.

Flow Switch [FI. Mech.]: Electromechanical device that will make or break an electrical circuit at a given flow rate.

Fluted Stem: The tubing housing the reed switch that the float rides on, having specially shaped grooves along its axis to allow particulates to collect in them. Designed to help eliminate float jamming due to lime deposits.

## GLOSSARY

GPM: (gallons per minute) Units of measuring liquid flow.
Grip Rings: Float stops used to limit float travel. Circular split metal rings whose fixation to the stem relies on its own tensile strength alone.

Hermetically Sealed [Eng.]: Air tight seal; i.e. reed switches are hermetically sealed within a glass enclosure to isolate the contacts from the surrounding elements.

Hertz [Phys.]: Unit of frequency cycle per second.
Hirshman Connector: Brand name of quick disconnect electrical interface.

Housing [Eng.]: The body.
Hysteresis [Phys.]: See "Differential".
Increasing Set Point [FI. Mech.]: Actuation set as the flow increases.

Inductive Load [Elec.]: Alternating load current lags behind the alternating voltage of the load, i.e. coils, transformers, etc.

Interface Float: A float whose specific gravity (s.g.) is adjusted to be buoyant in a higher s.g. liquid, as water 1.0, but will sink in a lower s.g. liquid, as oil.

Intrinsically Safe Barrier: A device which limits the power (energy) which can be delivered from a safe area into a hazardous area.

IPS: Inner pipe size.
J-box: (junction box) Electrical enclosure.
Lamp Load: A load that is of an incandescent lamp; any device which consumes power that is connected to another device or circuit that supplies the power.

Level Indicator: Non-electrical float device that shows liquid level at point of installation.

Level Switch: Electromechanical level detection device that will make or break an electrical connection by the float's rise or fall.

LO: (length overall) Used for stem length on Model 4000/4900/ 5000 custom level switches, etc.

Locking Wire: Wire or plastic filament used to lock bonnet assembly in place.

Magnetic Field [Electromag.]: Natural and artificial elementary fields or forces found in the vicinity of magnetic bodies or current-carrying medium.

Mating MS Connector: Female connector that interfaces with male pin connector.

Max. Flow Rate: Maximum flow through the flow switch.
Max. PSI: (maximum pounds per square inch) Maximum pressure recommended.

Max. Temp: Maximum temperature recommended.
Mechanical Shock [Mech.]: (impact shock) Forceful collision between two bodies sufficient enough to cause change.

Micron: Unit of measure used in filtration. One micron = millionth meter = . 00003937 inches.

Micron Filter: Filter used to help maintain a predetermined amount of purity. Micron denotes minimum size of particulates filtered.

Mounting Attitude: The position in which a unit is mounted or installed; i.e., tank top, tank bottom or side mounted.

M-SB: (monel trim with silver brazed process connections) Available on our marine flow switch.

MS Connector: A male pin electrical connector.
N.C. [Elec.]: Normally closed. Electrical contact in closed condition whose system is inactive.

NEMA: National Electrical Manufacturers Association.
NEMA Rated: Rating or type given by NEMA which denotes a device will meet requirements for a given location or application; i.e., NEMA 4-watertight and dusttight indoor and outdoor, etc.
$90^{\circ}$ Angle Flow: When in and out ports are at right angles to one another.
N.O. [Elec.]: Normally open. Electrical contact in open condition whose system is inactive.

NPT: National pipe thread (tapered thread) usually designated by nominal pipe size and number of threads per inch.

Ohm [Elec.]: Unit of measurement for resistance and impedance. See "Conversion Factors".

Operating Pressure [Eng.]: The maximum working pressure allowed at that device.

Operating Temperature [Eng.]: The maximum working temperature allowed at that device.

Orifice: A device used to regulate flow through it to accurately achieve a specific set point.

Petcock: A small valve used to drain off excessive waste material; i.e., bleed systems, trapped air.

Ph 15-7 Mo: Basic 300 series stainless steel; 15\% chromium, 7\% nickel, and 2.5\% molybdenum.

Pilot Duty: The rating assigned to a relay or switch that controls the coil of another relay or switch.

Piston: A cylindrically-shaped member housing a magnet which rides in a bore that is displaced by the dynamic force in a flow switch. The displacement will cause either actuation or deactution, depending on the proximity of the reed switch assembly.
P/N: Part number.

## GLOSSARY

Polypropylene: A light weight plastic generally known for its high chemical resistance.

Polysulfone: A high performance thermoplastic known for its high tensile strength, temperature resistance and wide chemical compatibility.

Pressure Drop [FI. Mech.]: The difference in pressure between two points in a flow system.

Proof Load [Eng.]: A predetermined test load, greater than the service load.

PSI: (pounds per square inch) Unit of measuring pressure.
PSIG: (pounds per square inch gauge) Unit of measuring pressure above " 0 " gauge. " 0 " gauge is equal to 14.7 PS I on the absolute scale.

PVC [Or. Chem.]: (polyvinyl chloride) Polymer of vinyl chloride; insoluble in most organic solvents.

Reed Switch [Electromag.J: A dry switch that has contacts mounted on ferromagnetic reeds hermetically sealed in a glass tube designed for actuation by an external magnetic field.

Repeatability: The percentage measurement derived from accuracy on a control, returning back to its original setting.

Reset Point: See "Reset Point Differential".
Reset Point Differential [FI. Mech.]: The difference between the set point and reset point.

Resistive Load [Elec.]: A load whose total reactance is zero, so that the alternating current is in a phase with the terminal voltage.

SCFH [FI. Mech.]: Standard cubic feet per hour of gas flow at specified standard conditions of temperature and pressure.

SCFH [FI. Mech.]: Standard cubic feet per minute of gas flow at a specified standard conditions of temperature and pressure.

Set Point [Cont. Sys.]: The actuation or deactuation point at a predetermined flow rate at which the contacts will make or break.

Set Point Accuracy [Eng.]: A permissible deviation from a specified value, given in a percent.

## Set Point Differential: See"Differential".

Shuttle: Same as piston, except the shuttle housing the magnet rides on a stem instead of in a bore.

Silver Brazed Ports: Process connections with a grooved ring for insertion of a silver brazing alloy.

Slip Ports: Smooth non-threaded process connections allowing for its mating part to be glued in place; i.e., PVC fittings.

Socket Weld Ports: Smooth non-threaded process connections. Bored to accept pipe fittings, etc., and made of material suitable for welding.

Solid State [Eng.]: Pertaining to a circuit, device, or system that depends on some combination of electrical, magnetic and optical phenomena within a solid that is usually a crystalline.

Specific Gravity [Eng.]: (s.g.) The ratio of the density of a material to the density of some standard material, usually water at a specified temperature.

SST: (stainless steel) Corrosion-resistant alloy.
SSU [FI. Mech.]: (second, saybolt universal) Unit of measuring viscosity; the time in seconds for 60 milliliters of fluid to flow through a capillary tube in a saybolt universal viscosimeter at a given temperature.

SPDT [Elec.]: (single-pole, double-throw) A three-terminal switch for relay contact arrangement that connects one terminal to either of two other terminals. Allows for achievement of N.O. or N.C. condition.

SPST [Elec.]: (single-pole, single-throw) A two-terminal switch or relay contact arrangement that opens or closes a circuit.

Straight Thread: Uniform screw threads in which its pitch diameter is parallel.

Straight Through Flow: The flow path of a liquid or gas from the in port to the out port is in line to each other.

Stress Crack [Mech.]: (metal or plastic) An external or internal crack in a solid body.

Turbulence [FI. Mech]: (turbulence flow) Motion of fluids in which local velocities and dynamic pressures fluctuate irregularly.

V [Elec.]: (volt) The practical unit of electric pressure (voltage). The symbol for voltage is E or V. See "Conversion Factors".

VA [Elec.]: (volt amp. or volt- ampere) An electric measurement unit, equal to the product of one volt times one ampere, equivalent to one watt for direct current and a unit of apparent power for alternating current.

VAC [Elec.]: Volts alternating current.
VDC [Elec.]: Volts direct current.
Viscosity [FI. Mech.]: Internal resistance of a fluid whose impedance against flow rises as its viscosity rises. Can be measured in: 1.) poise (P); 2.) stokes (S); 3.) centipoise (cP); 4.) centistokes (cS); 5.) second saybolt universals (SSU), among others.

Viton: A fluorocarbon elastomer widely used in the making of 0 -rings. Recognized for its chemical compatibility and higher temperature use for a variety of applications.

Voids: Open passages through which liquid or gas can flow.
W [Phys.]: (watts) The unit of power in the meter-kilogram-second system of units, equal to 1 joule per second and equal to the power in a circuit in which a current of one ampere flows across a potential difference of one volt.

Watertight: Sufficiently sealed to prevent water from seeping through.

EASY ORDERING
